7.PROJECT DEMONSTRATION PHASE:

The Project Demonstration Phase is the final stage of the project where the working of the developed system is presented. In this phase, the implemented features are demonstrated to show how the system functions and how it meets the project objectives.

The demonstration helps to verify that the system successfully automates the employee data import process and improves incident management in ServiceNow.

Demonstration Steps:

The following steps are performed to demonstrate the working of the system:

1. Creating Employee Data

Open Google Sheets or Microsoft Excel

Create columns for employee details such as:

- Name - emalta
- Email – emalta@gmail.com
- Department - ServiceNow
- Manager - ajay
- Manager Email – ajay@gmail.com

Enter sample employee records

Save the file and download it in CSV or Excel format

2. Importing Employee Data

- Open the ServiceNow developer platform
- Navigate to System Import Sets → Load Data
- Upload the employee data file
- Create an Import Table
- Verify that the records are successfully imported into the staging table

3. Creating Transform Map

- Navigate to System Import Sets → Transform Maps
- Create a new Transform Map
- Select the Source Table (Import Employee Data)
- Select the Target Table (User – sys_user)
- Map the fields using Auto Match Fields and Mapping Assist

4. Transforming the Data

- Run the Transform process
- Transfer the data from the import table to the User table
- Verify that the employee records are created successfully

5. Displaying Employee Details in Incident Form

Open the Incident Form

Assign an imported employee to the incident

Using Dot Walking, the following details appear automatically:

Department

Email

Manager

6. Verifying Priority Customization

- Open the Incident Table
- Check the Priority Field
- Confirm that the default priority value is set to 3 – Moderate using Dictionary Override

Demonstration Result

The demonstration confirms that the system works successfully. The employee data is imported automatically into the ServiceNow system, and the employee details are displayed in the incident form without manual searching. The priority value for incidents is also customized according to the project requirements.

This project improves the efficiency of incident management by reducing manual work, ensuring accurate employee information, and providing quick access to important details during incident handling.
